

Digital Personalized Doctors OPD Clinic and Online Consultation Scheduler

Though we are in this digital era where communicating with a friend or a family member is a click of a button away wherever that person might be located on the global map, we still observe most of the OPD clinics operate on paper. The clinical staff register patients by manually entering their information on paper and maintain a deck of papers for years while patients schedule clinic visits or online consultations. There are many software vendors offer solutions for moving from the paper based doctors scheduler and patient record system to digital record system.

Our secured OsteosConnect digital platform is designed and developed based on the continuous feedback that we received from these doctors and clinical staff. The OsteosConnect scheduler app is very personalized with many rich features meeting specific doctor's requirements and hosted on Google Play Store under individual doctors branding.

In a way, our OsteosConnect digital platform and mobile and web apps promote individual practitioners whether they operate in a small of doctors or individual clinics. For key features and scheduling a demo sessions, you can review our products brochures and contact us through chat, email or contact information provided in the website.
